Chat UI Version: V1.1

<http://www.maything.com>

Thank you very much for purchasing this package.

This guide will tell you how to use Chat UI!

What is Chat UI?

This UI is Unity GUI(UGUI) component!

The component simulates the chat interface of wechat. You can input text chat content like wechat and view other people's chat content!

The new version support emoji and picture messages!

Components support IOS and Android platforms

Component support multiple languages

Note: this component only contains the GUI interface, not include the code of the communication part!

Import Chat UI Package

First you need import Chat UI package for your project!You can see:

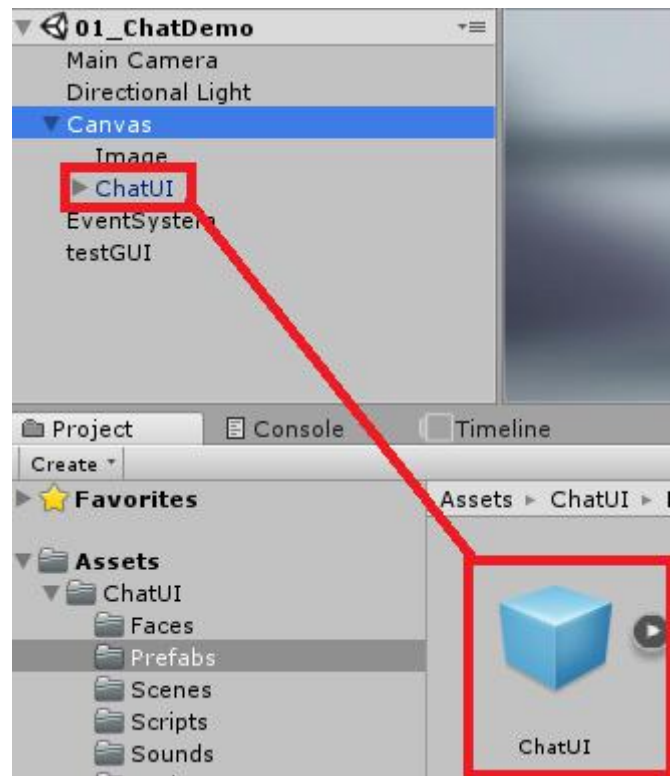

And now you can use Chat UI!

How To add Chat UI to Scene?

- You need add UI Canvas on your scene node:

- Drag "ChatUI" Prefab on your canvas scene node!
